

Thanks to Masiero, the remote control of indoor and outdoor lights is within the reach of your smartphone

The Masiero Smart Light brand new application, which has been developed by Masiero, the leading company in the top-range decorative lighting market, is a real innovation in the field of outdoor lighting. Indeed, this application enables the customer to control the on/off and dimming functions in remote, as well as to individually manage or to synchronize the colors and the color scenarios of all the lights in a home. This technology was originally developed for DRYLIGHT, MASIERO's renowned outdoor collection of Venetian style chandeliers, which incorporates two international patents. In fact, the DRYLIGHT collection is made with IP65 certificated materials and technologies, which guarantee strength and impermeability in all outdoor applications. Its latest version uses the dimmable RGB-W LEDs according to the DMX protocol or Wi-Fi control. Moreover, this Wi-Fi application for smartphone and tablet that runs on Android and IOS operating systems, is now available for Masiero's indoor Venetian style chandeliers with RGB-W LED lighting, allowing full control of spectacular colored lighting scenarios inside and outside any location.
